

Quick Installation Guide to Wireless Access Point

A. Hardware Installation

1. **Wired LAN connection:** Connect an Ethernet cable (i.e. UTP/STP RJ45) from your computer's Ethernet (RJ45) port to one of the LAN ports of this Wireless Access Point.
2. **Wireless LAN connection:** Locate this Wireless Access Point at free spaces to gain best Signal Strength.

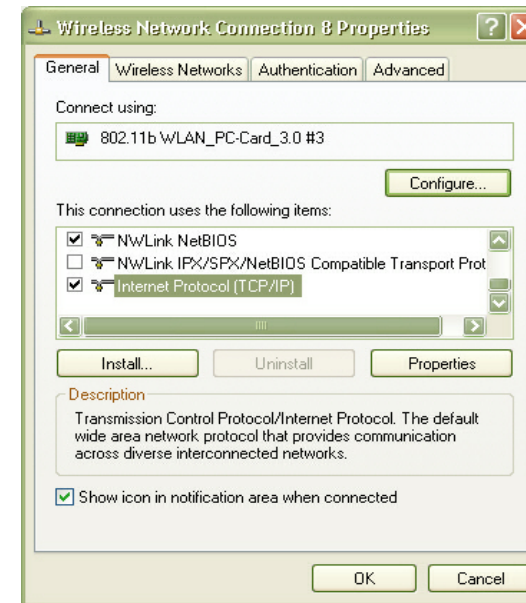

3. **Power on:** Plug the power cord into the outlet and the inlet of the Wireless Access Point.

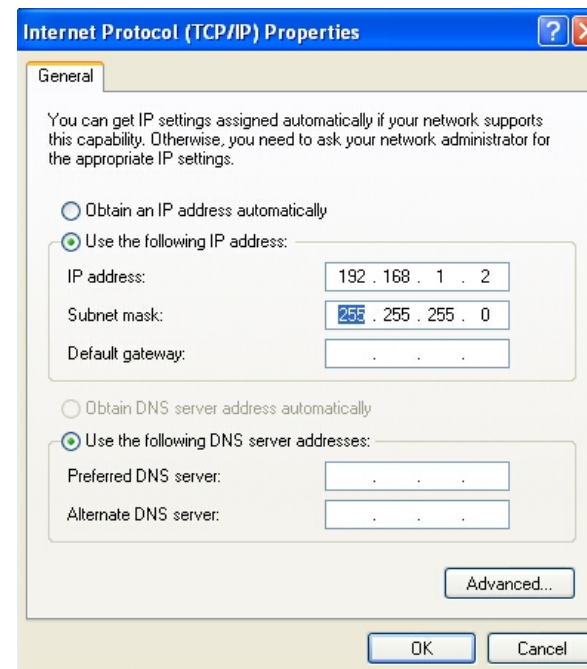

B. Configuring TCP/IP Settings of Your Computer

For Windows2000 and Windows XP:

1. Click **Start Menu**, choose **Settings**, select the **Control Panel** and double click on **Network and Dial-Up Connection**. (In Windows XP, please click **Start Menu -> Control Panel**. Select **Classic View** in the upper left corner, and then Double-click on the **Network Connections** icon.)
2. Right click on the **Local Area Connection** bound to your LAN Card and select **Properties**. Choose **Internet Protocol (TCP/IP)** and click on the **Properties** Button.

3. In **General** tab, select **Using the Following IP address** and fill in:
IP Address: 192.168.1.2, Subnet Mask: 255.255.255.0. Then Click on the **OK** button. Click on the **OK** button again in the **Local Area Connection Properties** Window.

For Windows 95, 98 and ME:

1. Click **Start Menu**, choose **Settings**, select the **Control Panel** and double click on **Network**. In **Configuration** tab, select **TCP/IP** and click on the **Properties** Button.

2. In **IP address** tab, select **Specify an IP address** and fill in:

IP Address: 192.168.1.2, Subnet Mask: 255.255.255.0. Then Click on the **OK** button. Click on the **OK** button again in the **Network** Window.

(Note: At this time Windows may require you to insert the Windows CD or restart your computer.)

C. Configuring Your Wireless Access Point with a Web Browser

1. Open your browser (i.e. Internet Explorer, etc.) and type the IP address (i.e. <http://192.168.1.1>) of this Wireless Access Point in the **Address** field. Press ENTER and it will pop up a logon window. Key in default username **admin** and password **iktpw** then click **OK** to the setup page. (Note: If you can't connect to your Wireless Access Point, please try to **disable the proxy settings**: (i.e. Open Internet Explorer, select **Tools -> Internet Options**. In **Connection** tab, click on the **LAN Settings** button and un-check all **Automatic Configuration** and **Proxy Server** options.)

2. Default Settings of this Wireless Access Point:

IP address: 192.168.1.1

Subnet Mask: 255.255.255.0

SSID: wireless_11a, wireless_11g

WEP: disabled

User name: admin

Password: iktpw

Note: You should configure your wireless network card based on the settings of the Wireless Access Point. Please refer to the User Manual in the CD-ROM for detail configuration.
